

Interactive Solutions

Pandoras Box Sensor Link

Interactive Screen Tracking

As interactive applications and installations are getting more and more popular, we are constantly developing new input interfaces to interact with almost any input technology out there.

With the Sensor Link we provide a unique highspeed sensor interface that is designed for custom installations.

Sensor Link allows you to interact with industrial encoders, distometers as well as analog potentiometers and contact closures.

For example at Startrek the Tour, multiple devices were in use to create interactive motion rides or sets to place the audience right in the middle of the scene.

Technical Features

- 2x 12V industrial encoder inputs with internal or external reset (GPI)
- 2x analog 10V inputs
- 8x GPI contact closure inputs Output is TCP/IP at variable frequency between 50-1000Hz

The internal sample rate reads incoming data at 7kHz to allow high resolution encoder inputs to be used for accurate motion sensing.
